Type: Journal Article
How to explore and report children with suspected non-accidental trauma.
Authors: C. Adamsbaum, N. Méjean, V. Merzoug et al.
Journal: Pediatric radiology
Year: 2010
Volume: 40
Issue: 6
Pages: 932-8
Abstract:
Child abuse is a controversial problem of special concern. Recent reports have focused on the broad variability of reporting to child protection services. Radiologists play a key role in the early diagnosis and imaging of suspected inflicted injury. Imaging must be performed and then interpreted with rigour.The aims of this review are: To review the recent recommended guidelines for imaging in cases of suspicion of abuse. These include a highly detailed complete skeletal survey with centered views, whilst brain CT and/or MRI are mandatory in children younger than 2 years. The use of abdominal imaging is debatable if the child has no symptoms. All siblings younger than 2 years
